

These demonstration gardens are provided to show how beautiful and functional water-wise gardens can be. As we all look to conserve water, consider the average homeowner uses 50% of their consumption on outside watering. With water-wise gardening using drip and smart irrigation controllers, hydrozone landscape design, native and drought tolerant plants, soil amendments and mulches, water consumption can be dramatically reduced without sacrificing aesthetics or utility.

Sponsored by the Monterey Peninsula Water Management District and the Monterey Regional Water Pollution Control Agency.
